DBWD

Background

Following discussions Crannull would like to implement some AI tools to assist the internal team with data cleansing, data sourcing, content creation, reduce administration tasks and general time saving. It was highlighted that this could be approached in stages, allowing the Crannull team time to use and understand the tools, before they become part of everyday usage.

Overall, the AI tools will save staff time, make information easier to find and scale up as the business develops. Our initial discussion focused on identifying and prioritising AI application usage and use cases that will enhance Crannull's efficiency. This phased approach focuses on delivering immediate value whilst establishing a competitive advantage and laying the groundwork for more advanced AI integrations later down the road.

Current Systems

CRM System: FiveCRM
Storage System: SharePoint: AU Only
Storage System: UK Only

Project Title

Crannull AI

DBWD Scope of Work

~~*Stage 1 - Custom AI Portal - Completed*~~

~~Overview:~~
~~We have setup a secure AI portal at-ai.crannull.co.uk that lets staff generate consistent, brand-aligned content such as emails, summaries and internal knowledge checks via pre-configured. The plan now is to complete further stages and full details about this stage can be found in the previous Crannull – AI Portals-2025-June document.~~

Stage 1 - Refinements:

Usage:
For improving reliability and consistency in day-to-day use. This refinement ensures the assistant clearly states what it can and cannot do, reduces "false promises," and streamlines the experience toward a single, capable assistant. It also lays lightweight building blocks (basic tools) that Stage 2 will extend.

Approach:
Users continue to log into ai.crannull.co.uk. We will strengthen the system prompt, explicitly list available tools, and consolidate separate assistants (Email / Grammar / General) into one primary assistant that dynamically uses tools. We'll also add basic assistive tools such as calculators, time/date and user memories over the next two portal updates to support future capabilities.

Costs:
Included in the current monthly subscription, and no action or payment is required by Crannull. This is already in development as part of our testing for the proposal and will be rolled out in due course.

Stage 2 – Tools & Data Imports

Usage:
Enable reliable, repeatable "data work" inside the portal: reading and transforming spreadsheets, producing ranked tables, and generating formatted outputs (PDF/XLSX/DOCX) for example. Also to bring live document sync (SharePoint/OneDrive and/or file server) so the assistant can fetch the right documents via tools rather than ad-hoc retrieval augmented generation.

Approach:
Implement an array of MCP tools that the assistant can call for file/search/export actions. Add a live syncing pipeline (SharePoint/OneDrive and/or file server) into a server-side index so we can pass relevant documents to the assistant via tools. Re-enable the Internal Assistant as a tool-driven capability (fetching/summarising synced docs) rather than a separate model. We will start by pulling from cloud.dbwd.co.uk and integrate directly with SharePoint/File Server where access is available (via Crannull's IT provider).

Features:
MCP tools (tool-calling inside the assistant) to:

- Read/search structured data from spreadsheets reliably.
- Perform operations: deduplicate numbers, filter by criteria, build ranked tables, etc using bespoke python tools.
- Generate formatted outputs (PDF, Excel, Word) and provide downloadable files.
- Improve and speed up web searching with MCP-backed retrieval.

SharePoint/OneDrive and/or File Server Sync:

- Selective, live sync of key folders. e.g. Current Clients & Old Clients.
- Server-side indexing and metadata to ensure accurate retrieval.
- Clean separation of folder scopes and automatic updates on add/change/remove.

Benefits:

- Reliable, auditable results for database-style tasks.
- Faster, clearer workflows for everyday data operations.
- One assistant that can fetch, transform, and export with sources.
- Up-to-date knowledge via live sync, without manual uploads.

Costs:

A one-off cost of £2,000, taking 3 weeks of development and 1 week of testing. During this stage these features will be accessible through a beta model on the portal which will sit alongside the main model and can be restricted to admin users on request. This is subject to implementation with current Crannull AI systems and how the data is pulled. No additional ongoing costs will be added to the monthly service.

Future Stages – Integrations

Call Transcripts with Templates:
Meeting notes or call summaries from transcribed calls formatted into structured Word/PDF documents using predefined templates and field mapping, with validation and human finalisation. Calls will be listened to with AI, with points summarised at the end of the conversation and provided to Crannull for review.

CRM Integration:
API calls into FiveCRM via to enrich answers with live data using RAG and database lookups, with guardrails and read-only access.

Data Cleansing:
AI solution that looks for outdated, duplicated and erroneous entries and attempts to populate old or missing data with new data or remove the data is no longer viable. Database refinement of 110,000 unique records through removal of dormant/obsolete leads, verification of company data accuracy, LinkedIn integration for data validation

Sales Performance Analysis:
AI-driven assessment of call quality and sales methodology for staff Development as well as tone and notes of client interactions.

Data Intelligence:
Automated pre-call research and data gap identification.

Costs:
We have not included a cost for these stages and serve as ideas of what to next progress as the specifics will need to be defined based on each task.

Timescales

The timeframes below are to gain an estimate of timescales before beginning development. *Key: C=Crannull, DD = DBWD*

Description	Responsibility	Timeframe
Stage 1 - Refinements	DD	In Progress
Stage 2 – Confirm Order	C	
Stage 2 - Development	DD	3 Weeks
Stage 2 - Testing	C & DD	1 Week
Stage 2 - Launch	C & DD	
Future Stages - Discussion	C & DD	

What Next?

If you have any questions or would like to order, please contact DBWD on questions@dannybarker.co.uk, 01462 819909. Or to order please complete and return the sales order on the following page.
